

2. Requirement Analysis Phase: Customer Journey Map

Objective

The Requirement Analysis Phase identifies the business requirements, user needs, system functionalities, and technology required to develop the Food Ordering Behavior Analysis dashboard using Tableau. This phase ensures that the project addresses business problems effectively and provides meaningful insights for decision-making.

A) Customer Journey Map

The Customer Journey Map illustrates the complete flow of a customer's interaction with the food ordering system, from browsing food items to providing feedback after delivery.

Stage	Customer Action	System Response	Business Goal
Discover	Customer opens platform	Displays restaurants/cuisines	Attract customers
Browse	Customer explores menus	Shows items, prices, ratings	Improve experience
Select	Selects food items	Adds items to cart	Increase conversions
Place Order	Customer confirms order	Recorded in database	Generate revenue
Processing	Restaurant prepares order	Updates preparation status	Reduce prep time
Delivery	Rider delivers order	Updates delivery status	Improve efficiency
Payment	Completes payment	Payment confirmation	Secure transaction
Feedback	Provides rating/review	Rating stored in dataset	Customer satisfaction
Analysis	Analyst checks logs	Tableau dashboard insights	Support decision-making
